WHALE FLOW CHEAT SHEET · 1 PAGE

Read Whale Flow Without Getting Faked Out

A simple, repeatable way to read options flow before you risk money. Flow is a radar ping — not a trade signal.

1) THE 30-SECOND FLOW DECODER

A. What happened?

Sweep = urgent fills across exchanges (often momentum/immediacy).
Block = negotiated large trade (often institution-sized).
Premium ($) = size/importance — confirm context (open interest, liquidity).

B. Why did it happen?

Speculation (directional bet) · **Hedge** (protection against a move) · **Roll** (close one position, open another).
Same print, three meanings. Guess wrong and you fade a hedge.

C. Where does price matter?

You only act around levels:
support / resistance · VWAP · prior-day high/low · 20/50/200 MA.

2) 5 RULES THAT STOP YOU FROM GETTING COOKED

1. **Flow + structure + confirmation.** Need all three. One is noise.
2. **Trade the level, not the story.** Entries live at breaks and holds, not mid-range.
3. **Define invalidation first.** Know where you are proven wrong before you enter.
4. **Size smaller when IV is high.** Premium lies when volatility is rich.
5. **No revenge trades.** One clean setup beats ten forced ones.

3) QUICK INTERPRETATION TABLE

READ	WHAT IT LOOKS LIKE	WHAT TO DO
Bullish-ish	Big **CALL** premium + price **above support** + trend up; repeated sweeps at the same strike (persistence)	Wait for a level trigger; do not chase mid-range
Bearish-ish	Big **PUT** premium + price **below resistance** + trend down; put flow rising as price tests support	Watch for the breakdown; keep invalidation tight
Neutral / caution	Mixed call + put flow with no trend = hedging / churn	Stand aside. This is where accounts bleed

4) THE 3-LINE PLAN (WRITE IT BEFORE YOU CLICK)

Line 1 — Trigger: the break/hold level that activates your idea
Line 2 — Target: the next level
Line 3 — Invalidation: where you exit if you are wrong
Example — Trigger: reclaim 610 · Target: 615 · Invalidation: lose 600

5) TWO QUESTIONS TO ASK ANY SCAN

"Is the index helping or fighting me?"

Index bias is the first filter. A perfect ticker-level setup against the tape is a trap, not a trade.

"Where is my stop, in dollars?"

If you cannot size the position from the invalidation line, you are not ready to enter.

Want the full system? The **Whale Trader's Toolkit** turns this into a daily system — setup dashboard, flow tracker, trade journal with P&L and win rate, watchlist, and a risk calculator. Educational process, not signals.

Educational content only — not financial advice. No performance claims or guarantees. Trading involves risk of loss. Levels and flow readings shown are illustrative examples, not recommendations. Always define your invalidation and risk a small, predetermined amount.
